HELITE H-MOOV AIRBAG **NEW**

ACCESSORIES

starting from € 599,00

DESCRIPTION

The Airbag vest is designed to prepare for impact and minimize its consequences without guaranteeing absolute protection against all injuries. It inflates close to the body to stiffen and maintain the torso in a neutral position. During impact, the energy is absorbed and dissipated across the entire surface of the vest.

Properties

- Large protection volume of 18 L
- The system can be reactivated in 2 minutes by yourself, simply by changing the cartridge
- Protects vital areas such as the back and spinal column, chest, abdomen, and hips.
- Prevents whiplash
- Avoids hyperextensions
- Shields against impacts

HEIGHT

The measurement of a figure or body relative to the distance between its lower and upper extremities.

SHOULDERS

Measure from one end of the shoulder to the other, starting from point A to point B, referencing the exact widest point of the shoulders.

CHEST AND WAIST

(C) Measure the circumference of the upper chest passing the tape under the armpits. (D) Measure the circumference of the waist at hip level.

HIPS

Measure the circumference of the hips by wrapping the tape around the hip area just below the belt line.

SLEEVE

Measure the arm from the highest point of the shoulder to the wrist height.

EXTENDED LEG

Measure the arm from the highest point of the shoulder down to the wrist
